

ABSTRACT

A top for a cooling tower having a bottom wall at least one opening therein for accommodating an air current generator. The cooling tower top additionally includes a plurality of hot liquid distributors for distributing hot liquid. The cooling tower top also includes a top wall having an opening for accommodating an air cooling generator and a liquid inlet.

1. A top for a cooling tower, comprising:
a bottom wall having at least one opening therein for accommodating an air current generator;
a plurality of hot liquid distributors for distributing hot liquid;
a top wall having an opening for accommodating an air cooling generator and a liquid inlet.
